Team 3

Carin Madden
Remediation Specialist

Ryan Carter
Incident Commander

Presentation Overview

System Hardening

Linux & Windows Infrastructure

Incident Response

Attack scenario and response timeline

Lessons Learned

Team strengths and areas to improve

Course Takeaways

Key cybersecurity principles

Linux + Windows | System Hardening

Six shared security improvements implemented across both systems

01 **Firewall & Network**

UFW + Windows Firewall; restricted access

02 **Stronger Authentication**

SSH keys; 12–14 character password policies

03 **Account Security**

Individual accounts; privilege controls

04 **Threat Protection**

ClamAV + Microsoft Defender

05 **Logging & Monitoring**

Auditd, AIDE + Windows/PowerShell logs

06 **Attack Surface Reduction**

Security updates; unnecessary services disabled

Summary of Attack Scenario

Identify | 10:36–10:58 AM:

Investigated phishing, impersonation, and unauthorized privileged access.

Contain | 10:58–11:46 AM:

Disabled compromised accounts and restricted affected systems.

Eradicate | 11:46 AM–12:00 PM:

Removed malicious artifacts and reset exposed credentials.

Recover | 12:00–12:01 PM:

Restored web services.

Lessons Learned

WHAT WENT WELL

- Strong teamwork
- Clear communication
- Detailed documentation
- Calm leadership
- Technical support

AREAS TO IMPROVE

- Follow IR sequence
- Improve task organization
- Clarify responsibilities
- Notify leadership sooner
- Avoid unverified promises

Biggest Course Takeaways

01 Protect human life above all else

02 Plan proactively to execute effectively

03 Never trust, always verify

04 Document throughout, not at the end

05 It is not if you get hacked, it is when

06 Make GRC compliance a priority
